APCProc callback function

An application-defined completion routine. Specify this address when calling the **QueueUserAPC** function. The **PAPCFUNC** type defines a pointer to this callback function. **APCProc** is a placeholder for the application-defined function name.

Syntax

```C++
VOID CALLBACK APCProc(
  _In_ ULONG_PTR dwParam
);
```

Parameters

dwParam [in]
>   The data passed to the function using the *dwData* parameter of the **QueueUserAPC** function.

Return value

This function does not return a value.

Requirements

Minimum supported client	Windows XP [desktop apps only]
Minimum supported server	Windows Server 2003 [desktop apps only]
Header	WinBase.h (include Windows.h)
